FIELD OF THE INVENTION

The present invention relates to a porous ink jet recording element.

In the Claims

Please rewrite Claims 1 and 4 as follows:

1. An ink jet recording element comprising a support having thereon a porous image-receiving layer comprising:

- (a) particles having a mean particle size of from greater than 0.04 μm to about 5 μm ; and
- (b) water insoluble, cationic, polymeric particles comprising at least 20 mole percent of a cationic mordant moiety wherein said porous image-receiving layer also contains a binder in an amount up to 20 weight %.

4. The recording element of Claim 1 wherein said binder is a hydrophilic polymer.

Please delete Claim 3.
